PROTON ELIC RB-1 MODEL-2

- Phase reading
- Thermal sensor
- Magnetic sensor
- Lidar sensor
- GPRS antenna

Newly developed PROTON ELIC RB-1 Model 2 fits military standards. Equipped with Lidar sensor technology, it has single thermal sensor with electromagnetic phase reading and precise measurement. By combining data from its different sensor, superior object identification, cavity detection, metal separation, distance and depth detection, location information can be obtained.

Unlike the Model 1 seri, the refined 64 pixel Thermal camera has added more phase reading accuracy to the Model2

It scans a large area in a short time and provide a real time 3D image on the computer screen.

PROTON ELIC RB-1 Model 2 has an area scanning range of up to 1000 meters and depth perception of up to 50 meters, depending on the size of the object and under the correct conditions of use.
